

Cleaning Supplies

The City of Corning uses various cleaning supplies in all city facilities. In 2019, the City inventoried general cleaning supply chemicals used in routine operations. These included items such as glass cleaners, tile cleaners, sanitizers, detergents, and solvents. The City staff identified 13 chemicals in routine use and began researching alternatives. These efforts resulted in reducing the number of cleaning chemicals from 13 to 3. These three chemicals are environmentally friendly alternatives and are supplied in concentrates reducing the amount of waste.

The City still uses a variety of specialty cleaning products for specific operations at its facilities. As cost-effective chemicals for these operations become available, and can meet operational needs, the City staff will consider their purchase.
