

## **Hazardous Materials Response**

The City's Fire Department has developed capabilities in response to hazardous materials that are used, stored and transported through our community. The Department is committed to protecting the environment through the prevention, preparedness, and effective response to hazardous materials incidents, whether accidental or intentional.

The City's Fire Department has received specialized training and equipment to respond to hazardous materials incidents. These capabilities are coordinated with other local jurisdictions through our Mutual Aid system.

By responding immediately to the discharge of hazardous materials, the Fire Department can reduce injury to the public and protect our environment.
