

## **Sunscreen Dispensers**

Skin cancer is the number one diagnosed cancer in the United States, but it is also the most preventable. The City of Corning recognizes the potential opportunity to avoid skin cancers and decided to make sunscreen more accessible at a few of its facilities and programs throughout the summer. Sunscreen dispensers are located at the two City swimming pools, the five Parks Program locations, the Summer Sports Camps and the Corning Senior Center.

The sunscreen dispensers are a product of Sunstation USA who has partnered with the American Academy of Dermatology (AAD) to help jump start sustainable sun safety at the local level through the installation of community sunscreen dispensers. These dispensers offer touch-free dispensing of SPF-30+ broad spectrum sunscreen. This sunscreen is 100% all-natural, environmentally friendly, reef-safe, and weather resistant.
